its Arabidopsis thaliana homolog that lacks the cytochrome b5 domain both function in the alpha-hydroxylation of sphingolipid-associated very long chain fatty acids.";
-1. Biol. Chem. 272:3828-19288 (1997).
-1. FUNCTION: INVOLVED IN THE ALPHA-HYDROXYLATION OF SPHINGOLIPID-ASSOCIATED VERY LONG CHAIN FATTY ACIDS. HYDROXYLATES THE C26-FATTY ACIDS. HYDROXYLATES THE C26-FATTY ACIDS. HYDROXYLATES THE C26-FATTY. ACID OF INOSITOLPHOSPHORILCENAIDE-B (IPC-B) TO FORM IPC-C.
-1. COFACTOR: IRON (BY SIMILARITY).
-1. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (POTENTIAL).
-1. DOMAIN: THE HISTIDINE BOX DOMAINS MAY CONTAIN THE ACTIVE SITE AND/OR BE INVOLVED IN METAL 10N BINDING.
-1. SIMILARITY: CONTAINS A CYTOCHROME B5 FAMILY, HEME-BINDING DOMAIN.

J. Bacteriol. 174.7385-7397(1992).
-I- FUNCTION: INVOLVED IN A GENERAL SECRETION PATHWAY (GSP) FOR THE EXPORT OF PROPEIDINS. REQUIRED FOR THE TRANSLOCATION OF THE MULTIPLE PECTIC ENZYMES.
-I- SUBCELLULAR LOCATION: OUTER MEMBRANE (PROBABLE).
-I- SIMILARITY: BELONGS TO THE EXED/OUTD/PULD/XPSD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GENERAL SECRETION PATHWAY PROTEIN D.                                                                                                                                                                                                                           Odell C., Bowman S., Barrell B.G., Rajandream M.A., Walsh S.V.;
Submitted (SEP-1995) to the EMBL/GenBank/DDBJ databases.
-1-FUNCTION: THE GLYCINE CLEAVAGE SYSTEM CATALYSES THE DEGRADATION OF
GLYCINE. THE PROTEIN BINDS THE ALPHA-AMINO GROUP OF GLYCINE
THROUGH ITS PYRIDOXAL PHOSPHATE COFACTIOR; CO(2) IS RELEASED AND
THE REMAINING METHYLAMINE MOIETY IS THEN TRANSFERRED TO THE
LIPOAMIDE COFACTIOR OF THE H PROTEIN.
-1-CATALYTIC ACTIVITY: GLYCINE + LIPOYLPROTEIN = S-AMINOMETHYL-

                                                                              The present sequence is the antigenic epitope P602, derived from a procal membrane antigen. (AMA-1) of the asexual blood stage of Plasmodium falciparum. It is used in the construction of recombinant protein CDC/NIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melitin signal peptide, (His)6 tag, T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein. (SSP-2), liver stage antigen-1 (LSA-1), merozoite surface protein. (MSP-1), MSP-2, apical membrane antigen-1 (RAP-1) and gamete specific antigen. PfG27. These epitopes were obtained at different stages of the life cycle of P. falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for

The present sequence is that of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melittin signal peptide, (His)6 tag, T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein-2 (SSP-2), liver stage antigen-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical membrane antigen-1 (RAP-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Pfg27. These epitopes were obtained at different stages of the life cycle of activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for detecting P. falciparum in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

AAQ80910 encodes AAR68840 the P. falciparum AMA-1 gene product. New recombinant poxviruses containing either the SERA, ABRA, Pfhsp70, AMA-1, Pfs25, Pfs16, CSP, PfSSP2, LSA-1, LSA-1 repeatless, MSA-1, MSA-1 (N-terminal pp3 or C-terminal pp42) genes, or a combination of these in non-essential regions of their genomes are claimed. These poxviruses (pref. with a virulence reducing genomic deletion or disruption) can be used as vaccines against malaria and for the prodn. of Plasmodium immunogens. These viruses provide multicomponent, multistage vaccines due to their expression of sporozite, liver stage, blood stage and sexual stage proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant poxvirus contg. Plasmodium DNA in non-essential region - useful in vaccines against malaria and for prodn. of Plasmodium immunogens

                                                                                                the complete P.vivax merozoite antigen gene and e.g. a purely or vaccinia virus vector sequence and regulatory elements. This allows efficient expression of the antigen on transformation of host cells. It is useful in an anti-malarial vaccine for conferring immunity against the merozoite form of the parasite and preventing infection of uninfected red blood cells.
Plasmodium merozoite antigen proteins and DNA sequences - useful in vaccine prodn., anti-malarial drug design, and in diagnostics
                                                                                   This protein is encoded by a recombinant DNA molecule comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Predicted mol. wt. is 63901 D. This shows great similarity to P. falciparum RMA-1 protein (sequence in specification-claimed)
                                                                                                                                                                                                                                                                                                                            .;

                                                                                                                                                                                                                                                                                                          Plasmodium merozoite antigen proteins and DNA sequences - useful in vaccine prodn., anti-malarial drug design, and in diagnostics
                                                                                                                                                                                                                                                                                                                                                                                          This protein is encoded by a recombinant DNA molecule comprising the complete P.knowlesi merozoite antigen gene and e.g. a pUC19
                                                                                                                                                                                                                                                                                                                                                                                                                         or vaccinia virus vector sequence and regulatory elements. This allows efficient expression of the antigen on transformation of host cells. It is useful in an anti-malarial vaccine for conferring immunity against the merozoite form of the parasite and preventing infection of uninfected red blood cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The present sequence is mouse serine/threonine kinase, YAK3. The YAK3 is useful for screening compounds which inhibit or stimulate the function of YAK3. The identified agonists and antagonists are useful in treatment of human diseases including neutropenia, cytopenia, anaemias including anaemias due to renal insufficiency or due to chronic disease such as autoimmunity or cancer, polycythaemia, myelosuppression, inflammatory diseases such as adult respiratory disease syndrome, rheumatoid arthritis, psoriasis, dermatitis, asthma, allergies, rheumatoid arthritis, psoriasis, dermatitis, asthma, allergies, particularly infections caused by HIV and other immunodeficiency diseases, pain, injury, anorexia, Parkinson's disease, cardiovascular

diseases including atherosclerosis, hypotension, hypertension, myocardial infarction, ulcers, psychotic and neurological disorders including anxiety, schizophrenia, dementia, delirium and dyskinesias such as Huntington's disease. The YAK3 is also used as a probe to screen suitable libraries to obtain murine YAK3 genomic DNA clone and for chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies expression and activity. Diseases related to kinase expression and activity. Diseases related to kinase expression and activity. Diseases related to kinase expression and activity. Diseases related to myocardial infarction, disorders, complications of organ transplantation, myocardial infarction, timmune disorders, cardiomyopathias, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease,

The sequence was deduced from a full-length cDNA clone (see AAV57440) isolated from a testis cDNA library. Another clone (see AAV5743), from a skeletal muscle cDNA library, codes for a longer form (see AAW75790), termed hYAK-alpha. This may be a result of alternative splicing. The invention provides host cells and methods for producing hYAK3 polypeptides, as well as methods for treating subjects having need to enhance or inhibit hYAK3 activity, for

cellular effects through a signal transduction pathway. Transduction of signals from the celli surface receptors to intracellular effectors from the celli surface receptors to intracellular effectors frequently involves phosphorylation or dephosphorylation of specific protein substrates by regulatory protein serine/threonine kinases (PSTK) and phosphatases. Aberrant protein serine/threonine kinases activity has been implicated in a number of pathologies and disease activity has been implicated in a number of pathologies and disease activity has been implicated in a psTK with sequence homology to CDK's (cyclin dependent kinases, which have a role in cell cycling). It was originally identified in yeast where it can act as a cell cyclin supressor. Novel human homologues of yeast YAKI designated YAK3-2 have been described. YAK3-2 is expressed predominantly in heamatopoietic tissues such as bone marrow, foetal liver and in the testis. Inhibitors of hYAK3-2 is expressed to stimulate expression of cells in which it is expressed. The use of antisense oligonucleotides to achieve such ends is described. Nucleic acids encoding the HYAK3-2 and the HYAK3-2 protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate HYAK3-2 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; YAK3b; serine/threonine protein kinase; STPK; signal transduction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapy; bone loss; osteoporosis; inflammatory disease; osteoarthritis; adult respiratory disease syndrome; ARDS; rheumatoid arthritis; allergy; inflammatory bowel disease; IBD; psoriasis; dermatitis; asthma, cachexia; human immuno deficiency virus; HTV; immunodeficiency disorder; psychotic; septic shock; restenosis; pain; cancer; anorexia; bulimia; hypotension; attherosclerosis; parkinson's disease; cardiovascular disease; anxiety; acute heart failure; myocardial infarction; hypertension; cutinary retention; angina pectoris; ulcer; benign prostatic hypertrophy;

The present sequence is human YAK3D (hYAK3D) serine/threonine protein
Xinase (STPK). YAK polypeptides are involved in the signal transduction
Xinase (STPK). YAK modulators are used to treat bone loss such as
Seteoporosis, inflammatory diseases such as adult respiratory disease
Seteoporosis, inflammatory diseases such as adult respiratory disease
Caydrome (ARDS), rheumatoid arthritis, osteoarthritis, inflammatory bowel
disease (IBD), psoriaais, dermatitis, asthma and allergies, bacterial,
fungal and viral infections such as human immunodeficiency virus-1
changed and viral infections such as human immunodeficiency virus-1
changed and viral infections such as human immunodeficiency virus-1
changed and viral infections of disease, cardiovascular diseases such as
restenosis, atherosclerosis, acute heart failure, myocardial infarction,
hypotension, hypertrophy and psychotic and neurological disorders
Such as anxiety, schizophrenia, manic depression, delirium, dementia,
severe mental retardation and dyskinesias such as Huntington's disease or
cilles dela Tourette's syndrome and proliferative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

```
This is the amino acid sequence of hYAK-alpha, a novel human protein kinase that is expressed predominantly in skeletal muscle. The sequence was deduced from a full-length cDNA clone (see AAV57439) isolated from a skeletal muscle cDNA library. Another clone (see AAV57440), from a testis cDNA library, codes for a shorter form (see Splicing. The invention provides host cells and methods for producing hYAK3 polypeptides, as well as methods for treating producing hYAK3 polypeptides, as well as methods for treating subjects having need to enhance or inhibit hYAK3 activity for diagnosing a disease related to expression or activity of hYAK3, and methods for identifying agonist and antagonist compounds. HYAK3 and methods for identifying agonist and antagonist compounds. hYAK3 polypeptides and polynucleotides can be used to treat and diagnose bone loss (e.g. osteoporosis), inflammatory diseases (e.g. ARDS), rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, containist, dermatitis, asthma, allergies, infections (e.g. Dacterial, fungal, protozoal and viral infections such as HIV), HIV-Associated dachexia and other immunodeficiency disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    septic shock, pain, injury, cancers (e.g. testicular cancer), anorexia, bulimia, Parkinson's disease, cardiovascular disease, (e.g. restenosis, atheroselerosis, acute heart failure and myocardial infarction), hypotension, hypertension, urinary retention, angina pectoris, ulcers, benign prostatic hypertrophy and psychotic and neurological disorders (e.g. anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's disease or Gilles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

"Analysis of variation in PF83, an erythrocytic merozoite vaccine candidate antigen of Plasmodium falciparum.";
Mol. Blochem. Parasitol. 42:285-287(1990).
-!- FUNCTION: INVOLVED IN PARASITE INVASION OF ERYTHROCYTES.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- SIMILARITY: STRONG TO AMA-1 FROM P.CHABAUDI AND P.FRAGILE, AND TO PR66 FROM P.KNOWLESI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

"Aploal membrane antiqen of Plasmodium fragile.";

Mol. Biochem. Parasitol. 39:279-284(1990).

-i FUNCTION: INVOLEDE IN PARASITE INVASION OF ENTHROCYTES.

-i SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i SIMILARITY: STRONG TO AMA-1 FROM P.CHABAUDI AND P.FALCIPARIUM, AND

TO PR66 FROM P.KNOWLESI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Expression and characterization of human FKBP52, an immunophilin
that associates with the 90-kDa heat shock protein and is a component
of steroid receptor complexes.";
Proc. Natl. acad. Sci. U.S.A. 89:10974-10978(1992).
I-FUNCTION: BINDS TO HSP90 AND IS ASSOCIATED WITH IT, INCLUDING
WHEN HSP90 PARTICIPATES IN HETERO-OLIGOMERIC COMPLEXES OF
UNTRANSPORMED MAMMALIAN STEROID RECEPTORS THAT SEDIMENT AT 8-10 S.
P59 MAY HAVE A ROTAMASE ACTIVITY WHICH MAY APPLY TO BOUND HSP90
AND THUS BE IMPLED IN THE INTRACELLULAR TRAFFICKING OF HETERO-
OLIGOMERIC FORMS OF STEROID HORMORE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -i- TISSUE SPECIFICITY: WIDELY EXPRESSED.
